No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

New isolated human matrix metalloprotease gene - used to develop products for the diagnosis, prevention and treatment of e.g. cancer, arthritis or inflammation.
                                                                                                                                           Producing recombinant domains of the human muscle nicotinic acetylcholine receptor (AChR) for treating myasthenia gravis, which contains the major part of the extracellular domain of the AChR receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MMP19; matrix metalloprotease 19; human; cancer; arthritis; inflammation; therapy; diagnosis; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                      The present invention relates to producing of a group of recombinant domains of the human muscle nicotinic acetylcholine receptor (AChR) subunites alpha, beta, gamma, delta and epsilon, or the mutant forms of the molecules, or the alpha domain containing the P3A exon, which contains the major part of the extracellular domain of the receptor. The method is useful for producing recombinant domains of the human muscle nicotinic AChR for the immunosadoxption of anti-AChR antibodies in myasthenia gravis patients. The permanently immobilized molecules can be used atther separately or in combination for therapeutic in vitro or exvivo elimination/apheresis of the majority of the anti-AChR antibodies from the blood or sera of MG patients. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Kostelidou
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Seguence 79 BP; 13 A; 23 C; 27 G; 16 T; 0 U; 0 Other;

The sequence represents a PCR primer used in the invention to amplify DNA encoding the clone 907334 matrix metalloprocease protein (MMP-ABT) from a plasmid. The invention relates to a novel polynucleotide, which comprises a nucleotide sequence encoding a human matrix metalloprocease protein (designated MMP-ABT). The protein of the invention has cytostatic, anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein, useful for diagnosing, inflammatory diseases (e.g. for treating these diseases.
                                   This sequence represents a PCR primer for the human matrix metalloprotease 19 (MMP19) coding sequence of the invention. The DNA, protein, and antibodies against MMP19 can be used in the diagnosis, prognosis, prevention or treatment of individuals with conditions associated with the expression of the MMP19 gene, such as cancer, arthritis or inflammation, or to identify a predisposition to these conditions. The DNA can be fixed to a substrate and used to detect the presence of MMP19 in a sample. The sequences can be used to make primers for use in reverse transcription PCR to detect MMP19, they can also be used to identify inhibitors of MMP19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human matrix metalloprotease protein MMP-ABT EST upstream PCR primer #2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, MMP-ABT; matrix metalloprotease; cytostatic; anti-inflammatory; anti-arthritic; gene therapy; cancer; inflammatory disease; arthritis; EST; expressed sequence tag; PCR; primer; ss.

inflammatory, and anti-arthritic activity. The polynucleotide may have a use in gene therapy. The MMP-ABT polynucleotides and proteins are useful for detecting, diagnosing, staging, monitoring, prognosing, preventing or treating cancer or inflammatory diseases (e.g. arthritis). The MMP-ABT proteins and polynucleotides are also useful developing therapeutic agents that affect MMP function

Determining open reading frames of genome of an organism e.g. a human suffering from cancer involves use of single oligonucleotide primer at low stringency for preparing single-stranded cDNA from mRNA of individual.

Example 9; Page 543; 959pp; English.

The invention describes a method of determining open reading frames in the genome of organism, comprising contacting mRNA from cell of organism with a single oligonucleotide primer (I) at low stringency, preparing single-stranded cDNA by reverse transcribing mRNA with (I), amplifying cDNA, sequencing the product, and repeating the contacting, preparing and amplifying steps with different primers and sequencing resulting nucleic acids. The method is useful for: determining that a known nucleotide sequence from a genome of an organism corresponds to a

conclected sequence of an open reading frame; for preparing a contig, nucleic acid molecule from a genome of an organism, and for sequencing connucles as the property of a genome of an organism. mRNA is obtained from mammalian or human cell which is associated with a pathological condition e.g. a colon cancer or breast cancer cell. The method is useful for analyses of large or small populations. further, it can be used to study living systems to determine if, e.g. there have been genetic shifts which render in individual or population more or less likely to be afflicted with congenited diseases, and the risk of affliction to a foetus, as well as the study of whether the conditions are likely to be passed to offspring through ova or sperm. The analyses for pathological conditions can be through ova or sperm. The analyses for pathological conditions can be carried out in all animals, plants, birds, fish, etc. Using this method, in the area of agriculture, for example the genomes of food crops can be studied to determine if resistance genes are present, defects in plant contained to determine if resistance genes are present, defects in plant contained to determine if resistance genes are present, defects in plant contained to determine if resistance genes are present, section as retroviruses and other integrating viruses such as influenza virus, have undergone shifts or mutations, which may require different approaches to therapy. This method is also applied to euwaryotic pathogens; such as cryptanosomes, different types of lasmodium, etc. The method essentially contained to the determination of the order of euwaryotic pathogens and other integrating viruses such as influences and elementing of non-coding portions. This method essentially and the pathogens of lasmodium, etc. The method essentially contained to the pathogens of lasmodium, etc. The method essentially contained to the pathogens of lasmodium, etc. The method essentially contained to the pathogens of lasmodium, etc. The method essentially contained to polynucleotide isolated from human colon cancer cell cDNA library

New nucleic acid that is a 5' expressed sequence tag (5' EST) for

```
diagnostic, forensic, gene therapy and chromosome mapping procedures.
cDNAs and genomic DNAs that correspond to 5'ESTs and for
 obtaining
```

Claim 1; SEQ ID NO 2137; 71pp + Sequence Listing; English.

The present sequence is one of a large number of 5' ESTB derived from mRNAs encoding secreted proteins. An ORP has been identified within the sequence. The 5' ESTB were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTB are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTB are derived from mRNAs with inteact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTB are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain uppercram regulatory sequences and to design expression and secretion vectors

Six hundred and twenty five polynucleotides derived from a variety of

The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted corrected that complements and sequences that hybridise to them. Also included are a vector comprising the polynucleotide, a host cell transformed with the vector, the proteins encoded by the polynucleotides, antibodies that bind to the proteins and identification of modulators of the proteins or the expression of the polynucleotide. The polynucleotides can be used as probes for the identification and isolation of full length con be used as probes for the identification and isolation of full length con as nutritional supplements. The polynucleotides and proteins can also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and gloorders such as viral infections, bacterial infections, fungal infections, autoimmune thyroiditis and chanced arthritis, multiple sclerosis, autoimmune thyroiditis and disected also useful for treating neurodegenerative diseases (e.g. Alzheimer's also useful for treating neurodegenerative diseases (e.g. Alzheimer's can also useful for disease, liver fibrosis, coagulation disorders coan din the treatment of burns, inclaions and ulcers. The proteins are also useful for regulating haematopoiesis for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA coagulating a secreted protein useful for treating disorders. human tissue sources which encode secreted proteins, immune deficiencies and disorders such as autoimmune Claim 1; Page 70; 339pp; English.

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of G SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences or each sequence tags (EST) for cidentifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations in esponsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense bnA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EST;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     expressed sequence tag;

The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gane inerapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result to M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarinoma, calear call cancer, aquamous call carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                    Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; cancer; colon; breast; ovary; oesophagus; kidney; thyroid;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN3503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                drug toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fighthlished not seminary.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in a liver tissue sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gene; liver cancer; ds; hepatocellular carcinoma; hepatotropic; metastatic liver tumour; cytostatic; expression profile; disease state; disease progression; drug toxicity; drug efficacy; drug metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 396 ATGAAGGTTCTGTGGGCTGCGTTGCTGGTCACATTCCTGGCAGGATGCCAGGCC 343

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method (M1) for screening for an antinopplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gne (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in AbL61664 to AbL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Horrigan S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ebner R, Endress G,

Novel diagnostic and therapeutic polynucleotides, used in disease diagnosis and for gene therapy of conditions such as cancer and thalassemia.

Claim 1; Page 274; 299pp; English.

The present sequence for human diagnostic and therapeutic (dithp) cDNA sequence #38 is 1 of 71 (AAS03012-AAS03082) novel sequence #38 is 1 of 71 (AAS03012-AAS03082) novel sequences described in the invention. The present sequence (Incyte ID No: 345699960e) encodes a secreted and extracellular molecule. The dithp polymucleotides may be used to diagnose a condition disease or disorder associated with human colecules. They can be used to identify the presence of similar nucleic acids. Dithp polymucleotides may used to generate hybridisation probes for use in chromosomal mapping. Polypeptides (DITHP) encoded by dithp are used to screen for molecules which bind to them and modulate their used to screen for molecules and the used for gene therapy of disorders such as severe combined immunodeficiaency syndrome (SCID), cystic fibrosis, thalassemia, haemophilia resulting from Factor VIII or IX deficiencies, cardiovascular disorders e.g familial hypercholesrenchaemia (FH), cell proliferative disorders e.g cancers, neurodegenerative disorders e.g. cancers, infectious disorders and developmental disorders. The antibodies can be used to analyse protein expression levels

```
The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The coronded polypeptides (ABR68902-ABR66849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellinaging, screening and diagnostic assays and for treating cellinaging, or Alzheimer's disease), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, collatelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                        New polynucleotides comprising sequences assembled from expressed sequence tags (ESTS), useful for treating cell-proliferative, neurodegenerative, automimune, genetic, myeloid or lymphoid, or platelet or coagulation disorders.
                                                                                                      Ren F;

Site 2: Smal; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of Lissue mRNA and cDNA amplification were performed under low stringency conditions."

Patent No. 5466593

GENERAL INFORMATION:
APPLICANT: Takeshi SHIMOMURA et al.
TITLE OF INVENTION: No. 54665911 Protein and Gene Encoding Said Protein
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wenderoth, Lind & Ponack
STREET: 805 Fifteenth Street, N.W., #700
CITY: Washington
                                                                                                                                                                                                                                Sequence
Sequence
                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FEMC_Celerra_SIDS3/ptodata/2/ina/1_COMB.seq:*

Patent No. 6974667

GENERAL INFORMATION:

APPLICANT: Horne, Darci T.

APPLICANT: Scherf, Uwe

APPLICANT: Gene Logic, Inc.

TITLE OF INVENTION: Gene Expression Profiles in Liver Cancer;
FILE REFERENCE: 44921-5028-WO

CURRENT APPLICATION NUMBER: US/09/880,107

CURRENT FILING DATE: 2001-06-14

PRIOR FILING DATE: 2000-06-14
COMPUTER: READABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: IEB PC compatible
COMPUTER: IEB PC compatible
COMPUTER: PatentIn Release #1.0, Version #1.25
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/709,949
FILING DATE: 19910604
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Seay, Nicholas J
REGISTRATION NUMBER: 96.29691801
TELECOMMUNICATION INFORMATION:
TELECHOME: (608) 251-5000
TELECHOME: (608) 251-9166
INFORMATION FOR SEQ ID NO: 1:
SEQUENCE CHARACTERISTICS:
LENGTH: 1157 base pairs
TYPE: NUCLEIC ACID
STRANDEDNESS: double
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RELEVANT RESIDUES IN SEQ ID NO: 1: FROM 1 TO 1157

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
